

Tensorflow Overview

CS294-112: Deep Reinforcement Learning

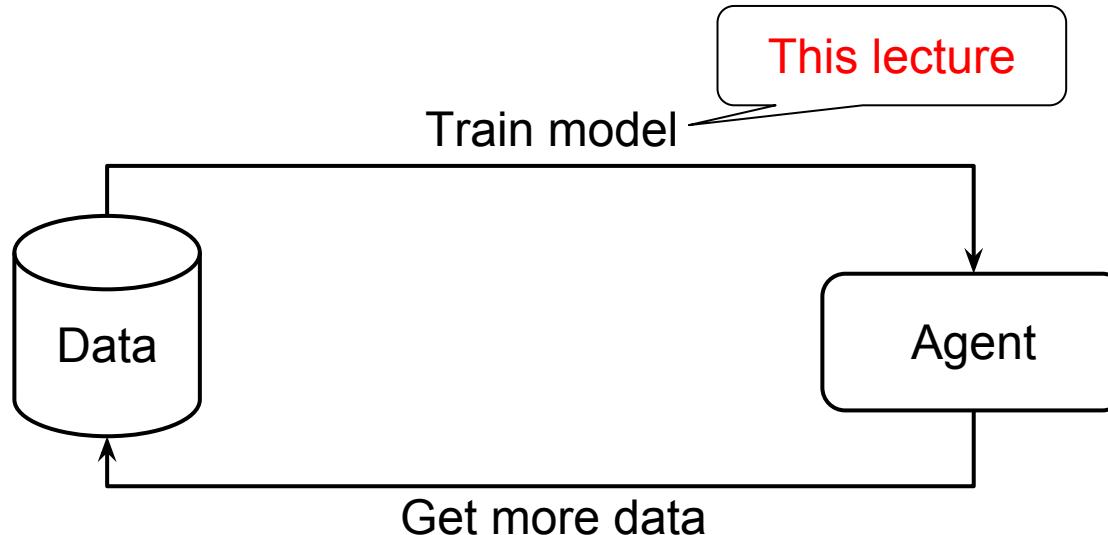

Goal of this course

Train an agent to perform useful tasks

Goal of this course

Goal of this course

Machine learning

How to do this?

$$\theta^* = \arg \min_{\theta} \sum_{(\mathbf{x}, \mathbf{y}) \in \mathcal{D}} \| \underline{f_{\theta}(\mathbf{x})} - \mathbf{y} \|$$

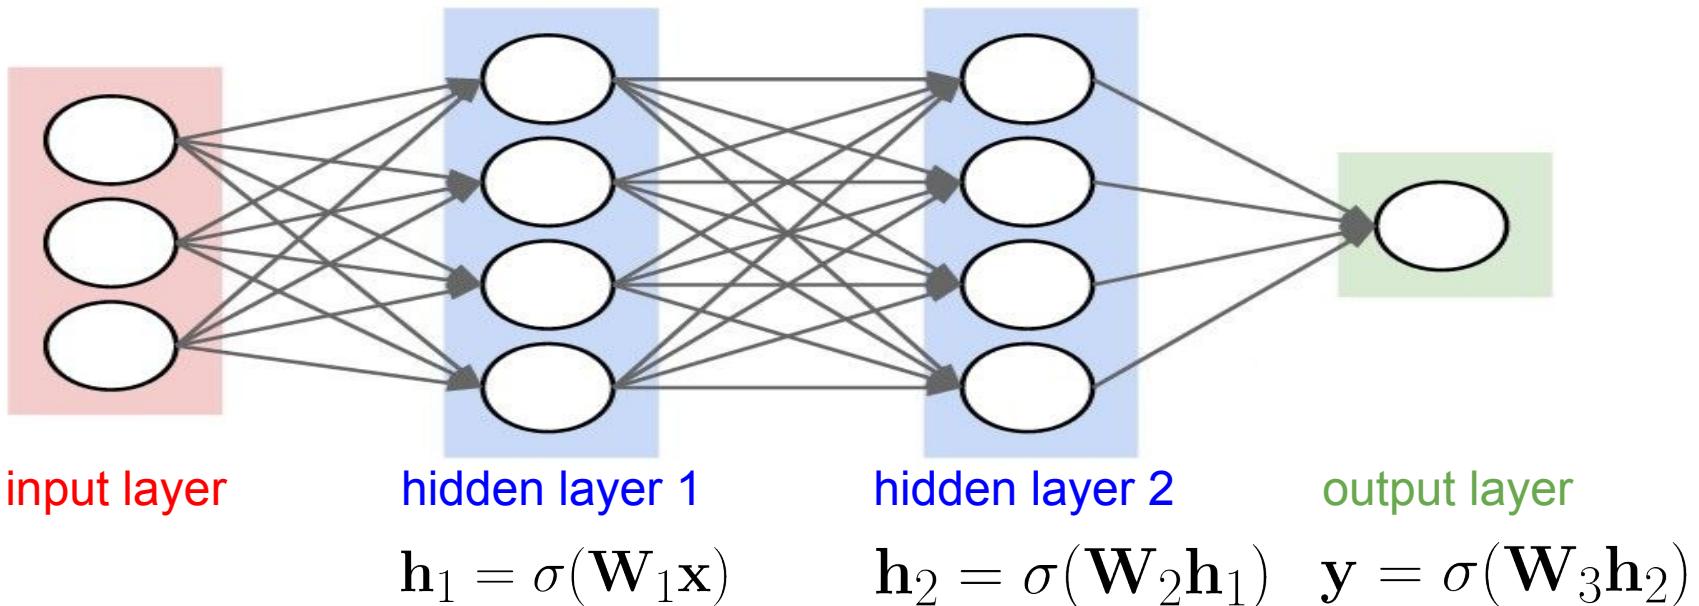

gradient descent

neural networks

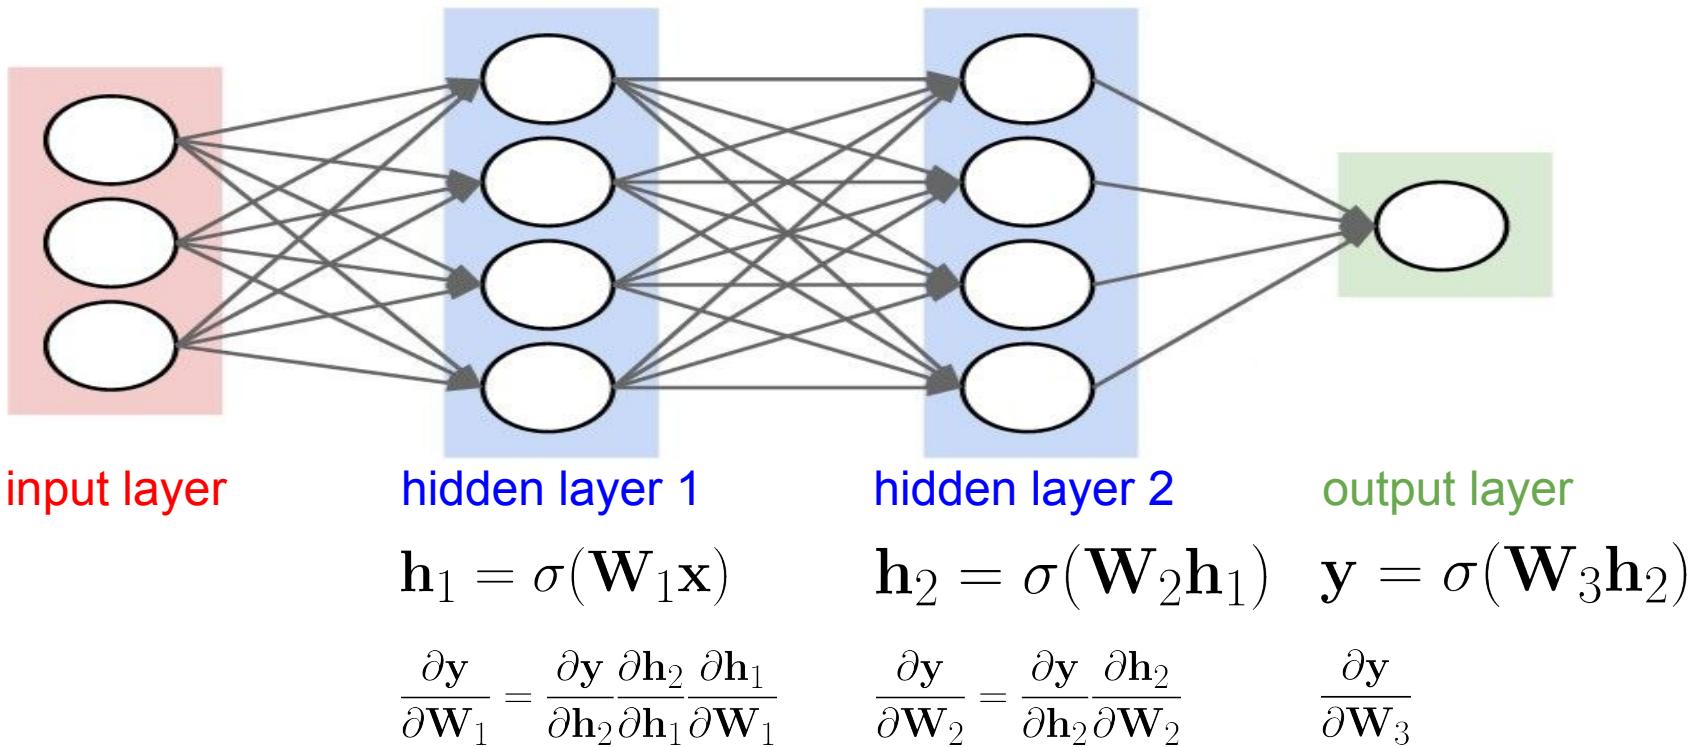

What is Tensorflow?

- Library for
 - Defining computation graphs
 - Calculating gradients

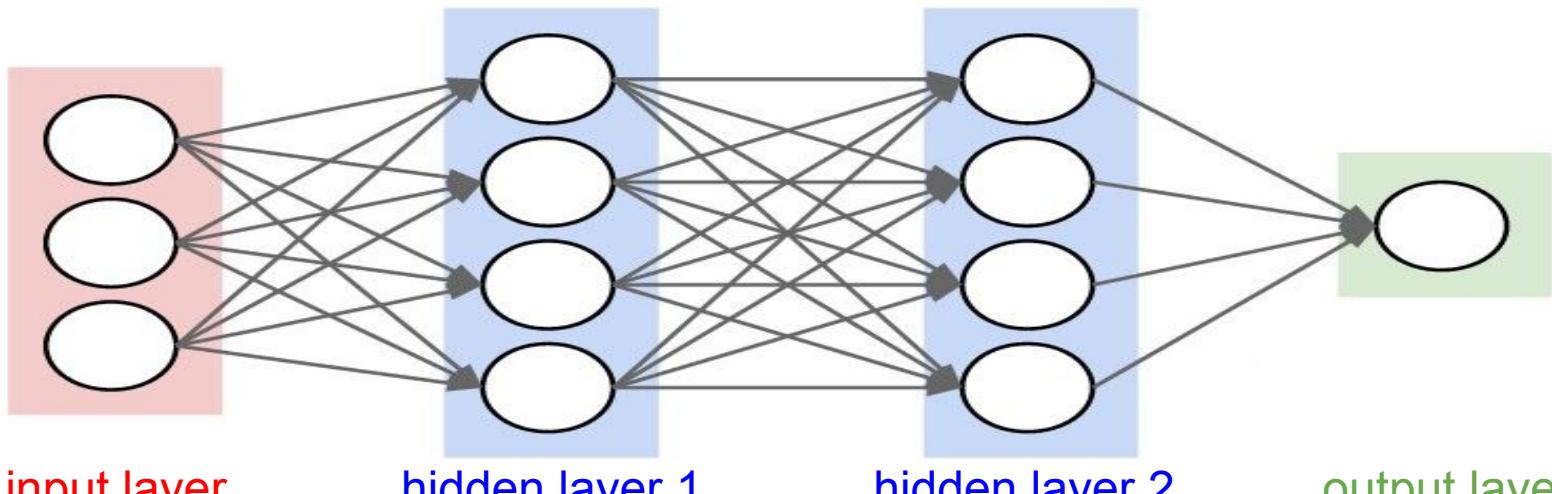

Tensorflow: defining computation graphs

Tensorflow: calculating gradients

Tensorflow: calculating gradients

You define	$\mathbf{h}_1 = \sigma(\mathbf{W}_1 \mathbf{x})$	$\mathbf{h}_2 = \sigma(\mathbf{W}_2 \mathbf{h}_1)$	$\mathbf{y} = \sigma(\mathbf{W}_3 \mathbf{h}_2)$
TF calculates	$\frac{\partial \mathbf{y}}{\partial \mathbf{W}_1} = \frac{\partial \mathbf{y}}{\partial \mathbf{h}_2} \frac{\partial \mathbf{h}_2}{\partial \mathbf{h}_1} \frac{\partial \mathbf{h}_1}{\partial \mathbf{W}_1}$	$\frac{\partial \mathbf{y}}{\partial \mathbf{W}_2} = \frac{\partial \mathbf{y}}{\partial \mathbf{h}_2} \frac{\partial \mathbf{h}_2}{\partial \mathbf{W}_2}$	$\frac{\partial \mathbf{y}}{\partial \mathbf{W}_3}$

Alternatives to Tensorflow

PyTorch, Caffe, Theano, MXNet, Chainer,

fundamentally the same
implementation differences

Hands-on with Tensorflow

<switch to Jupyter notebook>
